

digivu

VEHICLE UNIT DOWNLOAD SOLUTIONS

USE INDEPENDENTLY OR WITH THE DIGIPOSTPRO

The minimum legal requirement

Across Europe it is a legal requirement of the vehicle operator to periodically download the Vehicle unit (VU) activity data.

In the UK you are required to download Vehicle Units every 56 days.

Simple to use

Simply plug in your digivu and an orange activity LED flashes. When the vehicle download is complete the LED turns to green and if an error occurs it changes to red. A separate LED indicates the level of space left on the device.

Extremely fast

The PC software supplied with the digivu allows you to determine exactly which data you require from your VU and for exactly how many days. This saves needless time downloading data you do not need.

The digivu also keeps an internal database of all the trucks it downloads so that the next time it sees the same truck it will only download the required data.

Use in conjunction with digipostpro

The digivu is also designed to be used in conjunction with the digipostpro, our all in one device for collecting both Driver Card and Vehicle Unit data. Digipostpro replaces the PC and card reader scenario and can be placed in remote locations using either a LAN or GPRS connection.

Latest USB Model from 2015

If you have the latest USB model then you can read files into virtually any operating system which supports USB; Apple OS and Linux for instance.

The fastest VU Download tool currently available on the market.

Two simple traffic light style LEDs indicate the storage and activity status of the digivu so there is never confusion.

Want to download your VU in just 4.5 minutes?*

Super fast download speeds. Only download what you need.

*Download time Based on 30 days of event data from a VDO Test Unit, including speed. Timings will vary dependent on usage of the vehicle.

COMPLIANCE....DRIVER SAFETY....MAXIMISING PERFORMANCE....SIMPLIFYING PROCESSES

DOWNLOADING VEHICLE UNIT DATA COULD NOT BE EASIER FAST, EFFICIENT AND FLEXIBLE

Connects quickly and easily to your PC

Digivu connects to any supported Windows™ PC using either the digidock or from 2015 the new USB connector*.

Customise digivu settings

You can customise the settings of your digivu so as to optimise its performance. You can choose to download a specific number of days or specific VU data.

Intelligence built in

digivu keeps a record of vehicles it has downloaded so that downloading the 'latest' data is actually based on an accurate date. digivu manages its own files including archiving and cleaning up partial downloads caused by any power interruptions.

Technical features

- Serial connection to VU
- Serial to USB docking station (2009 - 2015)
- USB direct and support for digidock (2015 onwards)
- Powered by VU or USB
- Dimensions; H:12mm, W:24mm, L:78mm
- Key ring mountable
- Internal flash memory
- Windows™ configuration software
- Upgradeable firmware via supplied software
- Plugs straight into digipostpro
- Include VDO additional data (e.g. 4hz speed data)

*Note USB connector only supports the USB Version.
Check the label on the product.
